

How can your colleagues find out about your patients when they can't find you?

EPLink™ H.I.S. Interface

**Accessible EP Study Data for Optimal Patient Care
Throughout the Hospital Network**

It's no secret that better information leads to better patient management and better integration of therapies and treatments. Bard Electrophysiology's EPLink™ Interface provides the integration solution for the EP Lab. Now you and the whole patient care team can access EP study results in the same way that other patient information is available from your hospital's central information system (H.I.S.).

A seamless bi-directional HL7 interface, the EPLink package imports patient demographic, work order, and ADT information prior to EP study initiation and exports EP results at the conclusion of the study. The open architecture design allows the LabSystem PRO to interface via the EPLink package with a wide variety of information systems, including commercial and custom designed systems.

For more information or a demonstration, call your Bard Electrophysiology Territory Manager today at **(800) 824-8724**.

LabSystem™ PRO EP Recording System EPLink™ H.I.S. Interface

A Gateway to Streamlined Patient Management

- Offers unparalleled access to information
- Reduces redundant entry of data and the potential for errors
- Easily generates custom summary reports

- Exports reports for referrals and patient records in PDF, Doc, and HTML formats
- Facilitates medical evaluation and more comprehensive patient care by colleagues
- Supports HIPAA and network automation compliance
- Seamlessly integrated with existing architecture
